

$$\text{arr}[] = \{0, 2, 4, 6, 7, 5, 3\}$$

$$\text{res} = \text{res} + \text{arr}[0] = 0$$

($\text{res} = 0$)

$$\text{res} = \text{res} + \text{arr}[1] = 2$$

$$\text{res} = \text{res} + \text{arr}[2] = 6$$

$$\text{res} = \text{res} + \text{arr}[3] = 12$$

$$\text{res} = \text{res} + \text{arr}[4] = 19$$

$$\text{res} = \text{res} + \text{arr}[5] = 24$$

$$\text{res} = \text{res} + \text{arr}[6] = \boxed{27}^*$$

\therefore for loop will work from $n=0$ to $n=6$ because only 7 elements are in the given array and

also $\text{result} = + \text{array}$ means \rightarrow

$\text{result} = \text{result} + \text{array};$
